

Greeting

I am pleased to present the new enhancements made to our application's home screen/dashboard. Our application already boasts a very good design language, and the leaderboard section is particularly engaging and effective. However, to further enrich the user experience, I have introduced a few additional features. Below are the changes I considered and implemented.

Changes Implemented

Motivational Quote: A new motivational quote or study tip is displayed each time the user logs in, adding an element of surprise and encouragement.

Personalized Recommendations: Based on the user's past activity and performance, recommended chapters or topics are suggested. This ensures that users are always directed to the most relevant study materials, helping them focus on areas that need improvement.

Quick Quizzes: A "Flash Test" feature provides a quick 3-question quiz based on the user's last solved questions. This dynamic quiz changes daily to keep the user engaged and help reinforce their learning.

Quick Access: Users can save their favorite or most frequently accessed resources for quick access. This "Saved Collection" feature allows students to organize their study materials efficiently and reduces the time spent searching for important resources.

Thought Process

The main objective behind these enhancements was to make the user experience more personalized, engaging, and efficient. Personalized greetings and motivational quotes are designed to create a welcoming and encouraging atmosphere every time the user logs in. By offering recommended chapters based on past activity, we aim to direct users towards the most relevant study materials, helping them focus on areas needing improvement.

The Flash Test feature keeps users engaged and aids in reinforcing their learning by providing dynamic, daily quizzes tailored to their recent activity. The Saved Collection feature enhances usability by allowing quick access to frequently used resources, thereby making study sessions more efficient.

These enhancements aim to make the dashboard more personalized, engaging, and user-friendly, ensuring that users have a new experience every time they log in while being well-

informed about all the features available within the app. Thank you for reviewing the changes. I believe these updates will significantly enhance the overall user experience.

Best regards,

Neel
